

# **Blockchain made enterprise-ready**

BlockFactory framework and use cases

## **About us**

### Key facts

- Founded in 1997
- Active in the blockchain space since 2012
- 37 digitalisation and blockchain experts based in Zug and Zürich

### Award-winning projects

Finalist of the IATA Innovation Award 2017, Abu Dhabi (GateChain)

Winner Swiss FinTech Award 2018, Early Stage (Proxeus)

## Selected clients and partners

# lockFactor

# **Blockchain made enterprise-ready**

# Realize value quickly through our modular approach

### **Application**

Blockchain plugging for traditional systems or a standalone app

### Middleware

Modular, blockchain agnostic building blocks

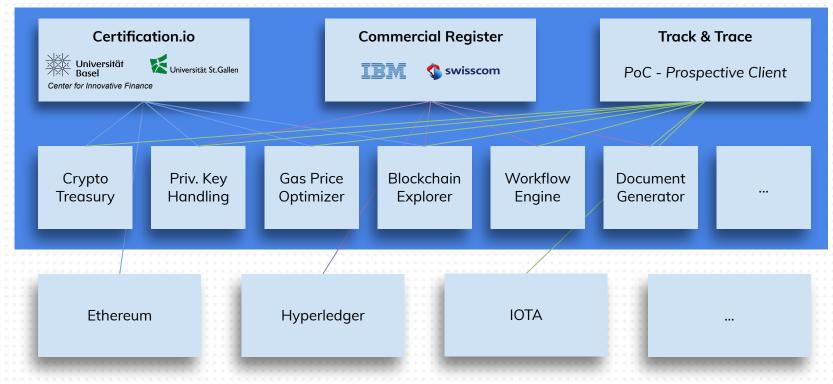

### Blockchain

# ockFactor

# **Blockchain made enterprise-ready**

Realize value quickly through our modular approach

# Choosing the right technology for your use case

### **Traditional Database**

Example	ERP
Member	Company
CRUD	Create, Read, Update, Delete
Performance / Speed	High
Cyber Security	Hacked on a daily basis
Resilience	Single point of failure
Transaction Cost	No
Infrastructure Cost	Yes

#### Private Blockchain

Hyperledger, Ripple, ...

Consortium

Create & Read

Medium - depends on consensus algorithm and number of nodes

No

Yes

#### **Public Blockchain**

Bitcoin, Ethereum, ...

Public

Create & Read

Slow

Ethereum has never been hacked

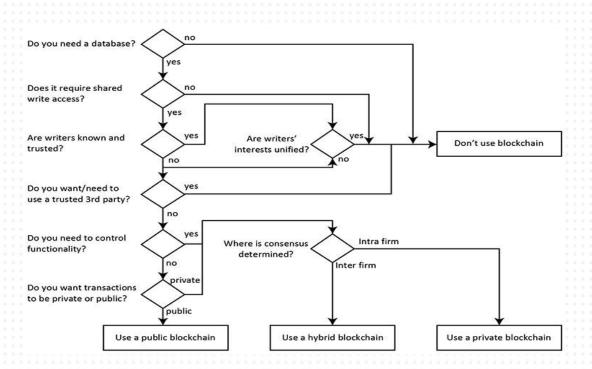

7'000 Ethereum nodes worldwide

Yes

No

## **Blockchain Use Case Assessment tool**

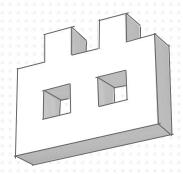

Source: https://medium.com/blockchain-fanatic/blockchain-and-digital-certificates-d9d6f6ad9008

# **Real Life Implementations**

The BlockFactory Framework applied

Bring back trust by making documents tamper-proof and easily verifiable on the blockchain.

# **Blockchain certified documents**

## Example - university diploma

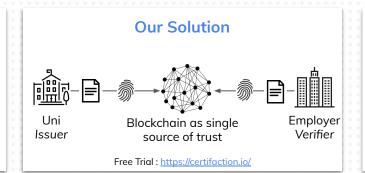

#### **Problem**

"Worldwide, 30% of senior executives present qualifications they do not hold." Source: UNESCO

Verifying a uni diploma is complicated & costly

- 60-90 min handling time per request
- 2 weeks average waiting time per request

### Value Added

### **Protect your reputation** Secure your document's

unique fingerprint on over 7'000 worldwide Ethereum blockchain nodes.

### Save time & money

Empower employers to verify a diploma directly on the blockchain to shorten the verification process from days to seconds.

### Blockchain made simple NO installation, NO crypto

trading or treasury, NO gas price payments, NO private key management

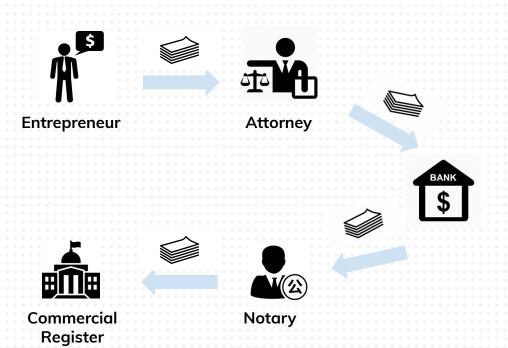

### **Potential Application**

- HR: Reference letter
- Healthcare: Prescription
- Luxury goods: Certificate of authenticity
- Pharma: Certificate of authenticity, auditable clinical trials

# **Pain points - Legacy Incorporation Process**

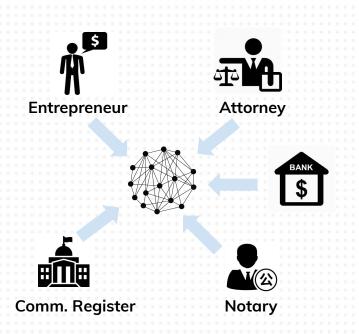

### **Pain points**

- 10 days to incorporate a company in Switzerland - rank 56 in the WEF Global Competitive Report 2017 similar to D.R. of Congo or Morocco
- Paper-based process with media discontinuities between the parties
- Costly legal verification of every single aspect of a ca. 30 pages legal documents

# **Solution - Digitalization of the E2E Process**

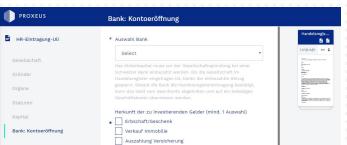

### Proxeus

- Customizable workflow engine
   No programming knowledge needed (WordPress for BC)
- Automated user interface gen.
- Automated document gen.

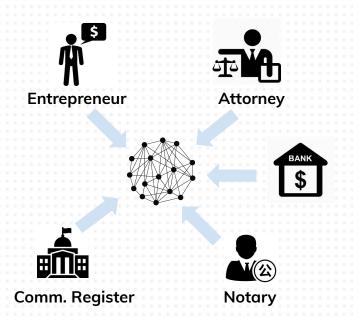

# Added Value - Digitalization of the E2E Process

#### **Added Value**

- New speed record 1h 37min to incorporate a company in Switzerland
- E2E digitized workflow without media discountinities
- Automated legal verification
  - Automatic error checks (e.g. min capital requirement)
  - Use of > 90% pre-verified text modules
  - Enhanced trustworthiness, cyber security and resilience due to blockchain

# Thank you!
